

# STERLING SCALE <sup>TM</sup>

SMART BASE / FLC / GRAVITY CONVEYOR

The SB bench platform is part of the versatile line of Sterling Check Weighers. State of the art imbedded circuitry allows data to stream to a remote location via RS232 output or any of the communications options. An optional hand held display can be provided to allow the operator to view weighing sequences or the unit can be controlled at the remote location. This allows higher security and control.

The unit shown above has a powered gravity conveyor mounted on the stainless platter. First the operator puts a good part on the conveyor. Then the re-set set point key is actuated by the remote operator . From that point the SB will accept the good parts and reject the bad ones. The conveyor will move the designated part either to the left or right for additional handling.

This is a scale that is very easy to set up and will check weigh your parts shift after shift.

PLEASE CONSULT STERLING OR AN AUTHORIZED DEALER FOR STANDARD AND / OR CUSTOM OPTIONS
